ALUMINUM SECTIONS

Windows • Doors • Facades • Sliding and folding areas • Surface treatment

WINDOW

Through your windows you can influence both the look and the function of your villa! With Schüco aluminum windows you have the opportunity to create an individual solution without having to take into account standardized dimensions. The choices are great in terms of surface treatment, function and design. Schüco is a successful system vendor with a well-developed range. Moreover, they have a high thermal insulation and are maintenance-free, you get on the purchase.

Why should you choose KPAB's aluminum windows?

- Lifetime - High quality and good material provides long durability
- Maintenance - Minimal maintenance
- Security - There are several security classes to choose from
- Individuality - Choose free of colors and shapes
- The range - A wide range and well-developed system
- Energy efficiency - Save energy with new windows

DOORS

A door is the first thing you encounter when entering a building and in order to get a good first impression, a door fits the environment. We offer several different models of doors for both private individuals and companies. Side panel hinged doors, sliding doors or shop doors with automatic opening and locking are available in the assortment. The profiles are sturdy and are good at even greater stress while maintaining a high degree of safety.

Advantages of aluminum doors:

- Design - Antique or modern look? You choose!
- Cutting - High security class
- Equipment - Choose from many handles, door bars, presses, etc.
- U-value - High thermal insulation and tightness

FACADES

With Schüco's facade system, we can manufacture large lots of glass and at the same time a strong construction. For the smaller facades, there are narrow profiles to give as much glass space as possible. If there are large facades, there are stronger profiles that provide a stable and good construction.

- Wide range with many solutions
- It is possible to integrate windows and doors
- Modern fire and smoke protection technology
- Long service life and minimal maintenance

SHUTTER AND VESSELS

With our shooting and folding areas you can let nature in a whole new way. There are fully insulated parties that shut out the cold and give you new opportunities with your home. Sliding and folding areas give you large glass surfaces that can be opened at the same time. A folding part is quick and easy to open and fold together. In open mode, they take minimal space. A slider can be manufactured in larger sizes and provides less visible profiles. Slides can be ordered with 2/3 openable surface.

- Excellent option if you want to erase the border between the inside and outside
- Great choice in terms of design
- High insulation value
- Stable constructions

FINISH

Our parts are lacquered with powder coating, this for the finish and durability required. Forget color like flakes and an eternal scratch. As a customer of ours, you can choose freely from RAL and NCS colors. You can choose, for example, white outside and blue inside. Thanks to our own powder coating system, we can coat plates, fittings or anything else in exactly the color you want. In addition to RAL and NCS, we also have anodized profiles if desired.
