

Rotary Drying

In order to meet diversified requirements of our prestigious customers, we are involved in providing a qualitative range of Rotary Dryers. We offer our customers with rotary dryers, which are perfect only for free flowing material. Without exhibiting lump forming or sticking properties, these materials are rehabilitated from slurry or wet cake to free flowing powder during the course of drying operations. Our rotary type dryers require less preservation and have roundabout heated surfaces.

Features

- Excellent strength
- Easy to operate
- Low power consumption
- Excellent performance
- Application specific design
- Maintenance free

Other Details

- Ideally suited for large capacity applications and uneven particle size distribution
- Continuous operation and versatile application
- Low operating & maintenance cost
