

Woodscrews

Product Information

Overview

Woodscrews have been around for over 130 years, originally having cut threads. Still today, with man-made materials the woodscrew is widely used and the point form allows for high speed automated assembly.

Application / Benefits

The gimlet point of the woodscrew creates a bursting action in order to penetrate timber without splitting

Point form Important for high-speed automated assembly

Hardened twin threads for improved holding power in material

Range

Woodscrews available in steel, stainless steel, brass, bronze & aluminium

Available in Pozi Csk, Slot Round, Slot Csk

Finishes

Finishes include Zinc / Clear and Zinc / Black
