

Paddy Separator

Paddy separator is used to separate paddy from brown rice. Dandekar variable stroke paddy separator is the latest development with use of quality stainless steel for flooring sheets, zigzags and completes covering of separation table. It is available in three types-CRCA & Wood Constuction, Stainless Steel (S.S.) & Wood Constuction and S.S. & S.S. Construction. A patented stroke adjusting device to ensure precise separation of paddy from rice for any variety of paddy. Provided with easy device to alter the inclination of table to achieve perfect separation. Stroke can be adjusted depending upon the variety of paddy. Paddy separator is easy to operate, low on maintenance and gives 100% separation of paddy and brown rice.

Salient Features

- A patented stroke adjusting device to ensure precise separation of paddy from rice.
- Provided with easy device to to alter the inclination of table to achieve perfect separation.
- The flooring sheet and zigg-zags made from heavy gauge cold rolled steel sheets.
- The compartment assembly is built on a rigid steel frame.
- A drive unit supports the compartment assembly on rubber wheels.
- The eccentric device mounted on the flywheel engages with the compartment unit to provide oscillation to and fro movement.

Advantage

- Lower power consumption.
- Lower cost of operation.
- Sturdiness and durability.
- 100% separation of paddy and brown rice.
- Stroke adjustability depending upon the variety of paddy.
