

Banjo Connectors

A high pressure compact fitting that allows transfer of fluid through 90°. Comprising of a perforated bolt (internally relieved bolt) and a spherical union allowing rotational alignment of the connecting tube/hose assembly. Commonly used in automotive applications such as brake calliper, turbochargers and power steering connectors. Rubbernek can adapt and manufacture Banjo Fittings to DIN 7643 or to customer drawings or specifications.

For more information on banjo fittings please contact our sales department who will be happy to assist you.
