

End Cap

Overview

Our diverse range of end caps are a proven method for capping off spigot end pipes on a temporary or permanent basis. Using the latest computer aided design technology software, we can design and manufacture end caps to any bespoke size and ovality.

Large Diameter

Our manufacturing facilities are capable of fabricating end caps to almost any diameter. Our manufacturing prowess allows us to provide the same high levels of quality throughout our entire range. For large diameter piping solutions, please don't hesitate to contact us and allow us to provide our expertise.

Oval Pipes

Our end caps can be fabricated to suit your pipeline in tricky situations where you may encounter ovality. To ensure our end caps are an exact fit, we can send out specialist engineers to measure your pipes and fabricate end caps tailor made to your exact requirements.

Coating Specification

Our end caps are finished with a variety of WRAS approved coatings, suitable for potable water. There are also a range of coatings for our end caps designed for sewerage applications. With a specialised coating company built within our business we can offer specialised coatings upon request.

Pipeline Materials

Quite simply, we can design and manufacture end caps for any pipeline. We have many years of pipeline experience spanning the entire globe and have worked on all types of line transporting a range of substances. Should you require our experienced engineers to take a look at your piping requirements or simply require some advice from our dedicated sales team, please do not hesitate to contact us.
