

Gravity Separators

Gravity Separators Pressure Type

- Most perfected Gravity Separator working on the principle of vibrating motion and fluidized bed.
- Pressure type model is economical Density Separator producing 3 to 5 Grades based on specific weights of products.
- Vacuum type model ensures most uniform air distribution resulting in to much finer cuts in grading. It also provides clean working in the plant as dust is aspirated to cyclone.
- Easy to adjust controls of Feed, Air, Speed, Deck- Elevation, Pitch, Torque & Runoff permits highest degree of separation with best possible settings.

Capacity Range : Upto 5 TPH.
