

Skid Packages

Given the enormity of Vessco's fabrication facility and diverse skill set of its work force; assembly of small, large, simple or complex pressurized skid packages forms an on going part of the businesses development.

Some of our shop assembled skid units have, for example, included mainly mechanical equipment such as high and low pressure pipe work, heaters, bursting discs, pumps and valves. That said, we've skid mounted some of our own vessels complete with electrical junction boxes and a variety of other intricate instrumentation. Applications range from HP Fuel handling through oil/water separation service to bio-fuel incineration, to name but a few.
