Cutting Services

Cutting Services

(Click image to enlarge)

Our cutting ability at **Herr & Sacco** paired with our newest division **Nitro Cutting Services** allows us to cut a wide range of materials with a high degree of precision. Specializing in laser, plasma and waterjet cutting services, for architects, designers, engineers, general contractors, fabrication facilities and manufacturing companies throughout the North Eastern United States.

From design to finished products our experienced team is dedicated to providing our customers with high quality solutions. Whether it is a low or high-volume order of parts, prototype or custom designed art piece, we can meet your exact specifications with our all-encompassing services.

Customers supply us with their designs in Solidworks, AutoCAD, or PDF formats, and our experienced machinists program the cutting software to produce the part to exact customer specifications. In addition to our cutting services, we offer a variety of metal fabrication, media blasting, and painting services as well as rigging and installation. For more information about our cutting capabilities, see the table below, or [contact us](#) directly.
