

**Kelvin Diesels engines** are used as propulsion machinery in hulls of wood, steel and GRP construction in a wide variety of vessels including barges, coasters, dredgers, ferries, pilot boats, trawlers and many other specialist craft.

Other engines in the series will be made available throughout 2018/19. It is noted that engines required for export markets may be de-rated to comply with state regulations for power outputs. Should you wish to obtain more information in the PZ series engines, or submit formal interest in a product, please contact us at Kelvin Diesels and we will assist you as quickly and as efficiently as possible.
