

Industrial Valves

Backed by an industrious task force, we are able to offer a wide range of BALL VALVES. It is available in a wide variety of construction material, sizes and specifications. Our gasket & seals offer unmatched performance and find widespread applications in standard flange assemblies, valves, pumps, heat exchangers, automobiles and home appliances. The exclusive range offered by us includes:

Three Piece Ball Valves

Our three piece ball valves are perfect for handling sticky and viscous fluid, slurries and highly corrosive and hazardous substances. These three piece ball valves can also be used effectively in handling air, water and normal liquid/gas flow. These three piece ball valves are designed as per the industrial standards and are also durable as well as precise. These three piece ball valves are corrosion resistant and easily affordable.

Two Piece Ball Valves

We manufacture two piece ball valves from high quality steel. These two piece ball valves are durable in nature and are a perfect shutoff appliance that makes these valves an excellent choice for wide applications. The two piece ball valves comprise of standard stem that forms an integral part of the valve providing excessive torque and the lining. These two piece ball valves are used to provide structural stability, flow efficiency and effective seating to the tool. Coupled with advantage of light weight and compact design these two piece ball valves are easy to operate and install.

Globe Valves

Our Globe Valves are Outside Screw, Rising Stem, Bolted Bonnet Construction, threads are away from the line fluid and easy to lubricate. Globe Valves are generally available with Plug Type Disc, which is designed to give leak tight seating over a long period of in built wear life. Globe valves body seat ring is shoulder type, threaded body seat ring which has large taper area that is for ample seating. Two nos. slots are provided on body seat ring, which is for easy removal for servicing at site. Welded type seat ring & Integral seat ring are also available in . Globe Valve. All Globe Valve stem is made from solid one piece construction. The yoke bush of Globe Valve has a long thread engagement for accurate stem alignment. The standard range of Globe Valve in sizes of up to 12 (300mm]

Salient Features

- Body & Bonnet made from high quality casting with liberal sections. The castings are precision machined for high performance
- Rising Stem & Rising Hand Wheel Construction.

Slurry Knife Slide Gate Valves

Knife Gate Valves are specifically designed and manufactured according to MSS SP81 to meet the worst working conditions in Pulp & Paper, Mining & Steel, Power & Chemical Industries to handle Semi-Solids, Dry-Ash, Chips, Fiber contents Pulps etc. The compact design of the Valves facilitate light weight, minimum space for installing, easy operation and maintenance. The compact Knife edged Wedge is manufactured from Stainless Steel Plates of various grades irrespective of Body material.
