

Ribbon Blender

These ribbon blender are fabricated from heavy gauge steel, or any specified material of construction. Design aspect planned for maximum efficiency in leak proof construction. These ribbon blenders are built for long trouble free service.

Multiple blades set at different angles on the horizontal shaft, sweep the entire length of the mixer trough. Ribbon Blender has the effect of moving alternate sections of the mix towards the center of trough and remainder towards the outer ends. This moves and turns the whole mixture to & fro, up & down movement, leaving no pockets of unmixed material and giving a through blending in the shortest possible time.

- Suitable for mixing of dry & wet material
- All contact parts in stainless steel
- Paddles so arranged on the shaft to give thorough uniform mixing
- Tilting arrangement, reversible switch and safety switch to stop the mixer as soon as the cover is opened
- The drive is through a system of suitable gear-box and motor
- Capacity - 50 Kgs. to 200 Kgs.
