

Honing Machinery

Description

This machine is made for honing 4000mm long and bore of 70mm to 450mm. it has auto expansion hone for ease of operation and faster operation.

The NAGEL product range offers solutions for the machining of bores in all lengths (up to 20000 mm) and diameters (1 mm to 2500 mm). Our product range includes different machine systems which can be individually adapted to meet customer requirements in relation to output (large-scale production or small batches) and flexibility.

The MSU4 high-end honing control system which is used in all machines of the NAGEL company enables problem-free application of all types of honing processes.
