

# Engine Radiators

We handle a broad range of Copper Brass radiator products meeting application requirements from small power generation sets to large vertical and horizontal cooling units, in addition offering one of the largest ranges or replacement serpentine on & off high way replacement radiator cores. We also have the ability to design the radiators to meet the specific performance and packaging requirements of a demanding customer base.

## Options

Expansion tanks  
Low level switches  
Fluid connection assemblies  
Fan control panels

## Common Applications

Engine cooling  
Process cooling  
Co-generation systems/heat recovery systems  
Compressor cooling  
Heat treating furnace cooling  
Closed loop cooling systems  
Process Cooling  
Oil Field Equipment  
Jacket Water Cooling  
Oil Cooling  
Compressor Cooling

## Benefits

Modular assembly  
Low profile  
Rugged light weight design  
Corrosion resistant galvanized steel construction  
High strength efficient core for maximum performance

We also offer mechanical/performance equivalents for your old Young and Perfex coolers and most other brands. Give us a call to discuss!
