

Pickling Tanks

We offer Pickling Plants and Pickling Tanks for Pipes, Tubes, Wires and Galvanizing. Our Pickling Tanks are made from chemical resistant thermoplastic and are welded with butt fusion and hot gas extrusion technology. Our Polypropylene or Pickling Tanks are designed on “RIAT” Tank Building Software Module.

We have introduced innovative engineering design and development in manufacturing of Thermoplastic Equipments, like using full sheet of Thermoplastic for Pickling Tanks. Weld less radius provides excellent mechanical strength for galvanizing of heavy weight structure.

Advantages

- Hot pickling
- Short pickling time
- Less pickling tanks
- Increased productivity
- Low production cost
- Low rejection
- Clean working area
- High employees' acceptance
- Better pickling quality
- Easy draining of sludge
- Corrosion resistant
- Maintenance free & cost saving
- Reliable welding seam
- Average Tank life upto 15 years
- Integral Fume ducting
