

Air Receiver

Providing you the best range of air receiver tank, air tanks, high pressure air tanks, vertical air receiver, horizontal air receiver and air receiver with effective & timely delivery.

Air Receivers offered find application in meeting the in-hand process requirements of the customers. As these air receivers feature use if latest technology support, these are able to maintain air pressures and in creating a comfortable atmosphere. Further, owing to their easy maintenance as well as high working efficiency, these are applicable in all types of industries and come tested up to 75 bar of hydrostatic pressure.

Features

- Air receivers comprise tanks used for handling needs of compressed air storage
- Recommended for use in all compressed air systems
- Allow decrease in wear & tear on compression module, control system and motor through reduction of excessive compressor cycling
- Eliminating pulsation from discharge line
- Efficiently separating moisture, oil and solid particles as present in air
