

Spur Gears

Spur gears, also known as straight gears, are the most common type of gear. They are used to transmit motion between two parallel shafts and are known for being highly efficient and producing a lot of power.

Gear Motions is capable of producing spur gears in a wide range of sizes and volumes. Our capabilities include precision ground and cut spur gears manufactured to standard or custom specifications. We specialize in high precision and high quality, including quality levels up to AGMA Q15.

Capacity : O.D.2" to 192"

1 Moudule to 20 Moudule or 24 D.P. to 1 D.P. Face width 1" to 8"

Material : Mild Steel, Cast Iron, Cast Steel, EN - 8 to 36
