

Brass Forgings

Wide range of forging enable us to forge brass from 20 Gram to 12 KG weight. All forging dies are designed in-house and other processes are outsourced.

We have In-house Tool Room and Workshop for basic maintenance and repair of forging die. Core Forging (Hollow Forging) significantly saves material and other processes.

Production starts after FPA and In-process inspection report of forging component ensures that any deviation in production is monitored and rejection is eliminated.
