

Hose Couplings

A hose coupling is a connector on the end of a hose to connect (or couple) it with another hose or with a tap or a hose appliance, such as an irrigation sprinkler.

Hose couplings have a variety of uses in any industry where the connection of a hosepipe to a tap, pump or other machinery needs to be secure and reliable.

With a variety of thread sizes and pressure resistance available, the pbi Range of hose couplings presents solutions for water lines, ink transfer and vacuum line applications.

The pbi Range of hose couplings includes hose inserts, hose elbow, hose nut & nipple, quick release coupling, crimping nut & nipple set and valves.
