

Blower Enclosures

Blower Enclosures have been designed by EI Williams for removable acoustic steel sound enclosures for Blower Enclosures. Our blower enclosures are designed for your specification, whether they are needed for 85 dBA (decibels) or lower, something that can be a concern in a quiet community property line. We can also make sure that other high sound reduction levels are met as well.

The blower enclosures have been measured to be 60-80% quieter in all aspects of the installation process, including during and after the equipment install. This is done by our designed and manufactured Blower Enclosure system.

Some features that are included are the frame system, silenced air intake, modular acoustic steel panels and exhaust fans.

Many different clients have happily utilized our blower enclosures for various purposes. All the features with the [EI Williams](#) Blower Enclosures create an easy maintenance and durability in a long period.

Please call EI Williams today to discuss all your Blower Enclosure needs and we will have an experienced engineer or consultant be happy to answer any questions you may have.
