

Boiler Header

Boiler Header is a manifold which tie multiple steam carrying pipes to one boiler. The manufacturing requires precision drilling of the holes for pipes with close tolerance, fabrication and heat treatment. Boiler header are designed for 47 Kg/Cm² pressure & 364°C temperature. The Boiler Headers are usually made from Chromium-Moly Steel like P11

Our enterprise is one of the renowned manufacturers and traders of Boiler Headers. Header is the prime constituent of coal and gas based boilers. This is manufactured using premium grade materials to ensure long operational life and corrosion resistant finish. Our all power plant equipment is designed using latest technological procedures in order to meet the varied demands of the customers. Our plant accessories are widely used in nuclear, Gas, Coal and Hydro power projects.

Specific features

- Compact design
- Sturdy construction
- Corrosion resistant finish
- High performance
