

Tee Strainer

Tee Strainer is similar to temporary strainers but with their own housing specially designed for piping system which can not be split to remove filter after commissioning or where strainer is to be left installed as an additional safeguard after commissioning. Easily accessible screen for servicing. Where particle size is coarse and contamination is less their Tee Strainer can be used as permanent strainers.

Features :

- Optimum quality
- Corrosion resistance
- Fine finish

Specification :

- Size: 1" to 24" NB
- Connection: Butt Weld & Flanged to 125/ 250 FF and 150/300/600/900/1500/2500 RF, can be drilled to BS tables, DIN and IS standards
- Material of Construction: Body & Cover: Carbon Steel, Stainless Steel with Stainless Steel Screen

We are engaged in **manufacture & export of T Type Strainers**, which are made from high quality raw material sourced from credible vendors. These industrial T-type strainers are available in various sizes and colours as per clients' specification.

We are engaged in **manufacture & export of T Type Strainers**, which are made from high quality raw material sourced from credible vendors. These industrial T-type strainers are available in various sizes and colours as per clients' specification. Tee Type strainers are designed to remove particles from the pipelines where a compact accessible strainer is needed for protection of pumps, valves and similar equipment. Their utility and pricing are big attraction factors for our regular and new clients.
