

Stickset Light

Stickset-light is a manual machine for deployment of snowsticks. A person needs to work on the machine, and drive all movements manually with handles. The stick is put in to the ground by hand.

The principle is the same as with Stickset 500 automatic machine.

Funnel guides the chisel and stick, and prevents the hole from falling appart.

Easy conroles, and good working space.

A clamp secures the stick in the ground.

Capasity 100 sticks pr. heure.

Hydraulic breaker can be replaced with drill in frozen ground.

Electric : 12-24VDC

Hydraulics: min. 40l/min, 140 Bar.

Weight: 400 kg.
