Automatic deployment and removal of snow poles.

Stickset 500

Deployment of snow poles.

The poles are placed in a container.
All kinds of poles.

The patented claw unit picks up one pole from the container.

The funnel guides the chisel, keeps the ground in place, and guides the pole down in the hole.

The machine controls the depth of the pole, to ensure the pole is put correctly in to the ground..

A piston compresses the mass around the pole.

Removal of snow poles.

Converting the machine for removal of snow poles are easy.

When machine is ready for removal, the claw is pointing forward, and are ready for picking up a pole. As soon as the pole touches the wheels, the pick up sequence starts.

A guide is mounted to help aiming at the pole.

The machine has picked up a pole, and it's placed in the container.

If automatic deployment are chosen on the touch screen, the machine will automatic return to position ready for a new pole.
