

## EFFICIENT AND FLEXIBLE PALLETIZING SYSTEM

VARO's palletizing system consists of a number of standard elements, which can be mixed and matched in a number of different combinations. This means that you can put together just the right system for your production.

The central elements of the system are:

- Robot units
- Pallet storage
- Feeding lines
- Labelling
- Wrapping

No matter how you put together your palletizing system, it can be integrated in an existing production line.
