

## TOS lathe through time

TOS lathe, TOS Trecin, Tren lathe or should we dare to just call them SN lathe. Dear child, many names, but in any case one of Denmark's most popular lathes.

We do not know how many people are in Denmark to this day, but thousands have been sold over time. For the sale of SN lathes started after the war, and after foreign trade was freely given in Czechoslovakia, Leo Madsen machines could again directly trade the factory TOS Trecin now called TRENS as

This in turn was the beginning of direct trade with a number of Czech and Slovak factories, which continues to greatly contribute to the fact that the price level is very low despite the high quality level being significantly increased.

Along with the well-known SN and SUI lathes, we also produce the new SN 500, SN630 and SN710 lathes, which many of our customers now choose because of the new elegant design. The larger bore (77/105/130 mm) and larger main motor of 7.5 kW. Spindle speeds from 12.5 to 2000 rpm, making the machine suitable for both larger and smaller parts.

Another factor for the low prices is, as the heads of the various departments have recently pointed out in a study. Are the major productivity improvements due to renewed machinery and new production management tools.
