

Heat Exchangers

METAL PLANTS designs, engineers and manufactures customized Shell & Tube type **Heat Exchangers and Condensers & Chillers** (for refrigeration application duty both halocarbon & ammonia application) to meet individual customers' process requirements meeting TEMA Class R, C or B code requirements. Mechanical designs are utilizing computer software that would allow optimum performance.

METAL PLANTS fabricates equipments from Standard & Low carbon steel, Stainless Steel and other alloy steels, of either solid or clad construction depending on design requirements and cost considerations. The equipments are covered under standard QAP under third party inspection.
