

Wave Spring

Symag Springs are engaged in offering a wide range of wave springs which are manufactured from best quality raw material and ensure accurate dimension, rugged construction, fine finish and longer service life. The advantage of wave coil is that they provide lower work height with the same force and light in weight.

The applications of wave springs are in aerospace electrical connector, flow valve application, pressure relief valve, multi-tooth cutter, valve, water valve, face seal, vibration isolator, axial piston pump, floating gear, clutch drive etc. These wave springs save space which results in the reduction of materials hence lowering the price.

These wave springs are manufactured from flat coil wire. Nowadays demand of the wave, springs are more because of its high functional efficiency and reliability. Symag provides these wave springs in various dimensions and technical specification and at market leading prices.
