

ROTARY EVAPORATOR

Characteristics : ADITYA rotary evaporators will be the most ideal equipment for efficient evaporation in your laboratory. They are suitable for standard distillation, for complex distilling processes as well as for automatic distillation. Aspects such as safety, convenience and cost savings have been taken into consideration during the development of the evaporators. This is reflected in the many unique product advantages our rotary evaporators provides. For instance, all evaporators are equipped with a separate **ON/OFF** switch for the heating function. They are also provided with Easy Lift - a simple touch operation to lift the flask. Key aspects of these rotary evaporators have been improved to provide the most ergonomic and functional designs. With the rotary evaporators you can compose your individual modular concept, consisting of rotary evaporator, vacuum pump and chiller

Distill your solvents reliably with the Aditya rotary evaporator. Aditya offers an intelligent solution to process your solvent evaporation easy and safely. Our vacuum distillation system makes evaporating easy for you and allows you to concentrate on your research.
