

Agriculture Pipe

Most essential demand for Agriculture sector is water. As we all know life cannot exist without water either Animal or plant. Therefore, we design agricultural pipes to cover even the small parts and provide them water supply. Only a small portion of cultivated land gets desirable water supply.

Pipes are best way to overcome the canal irrigation problem as they are laid underground and moreover, water loss due to percolation and evaporation is reduced to large extent. Lift irrigation is employed to draw water from a lower to higher level.

It requires various types of pipes. A good quality Rigid PVC Pipes offers trouble free service, durability and economical benefits, in fact a better choice than mild steel, galvanized steel and cast iron. Slotted pipes are used in digging bore wells in sandy areas.
