

Engineering Products

Leveraging on our industrial experience, we offer a gamut of engineering products to our clients. The products are manufactured from quality inspected materials of stainless steel, aluminum, copper and many others. This ensures that the products are high in performance, durable, corrosion resistant and require less maintenance. We can offer the products in customized configurations as per the specific requirements of our clients.

Piping System

Service Description:

Backed by a pool of experts, we fabricate and machine highly efficient piping systems. It is widely demanded for its high efficiency, corrosion & water resistance and durability. We have all the facilities to customize the system on basis of specific requirements of our clients.

Air Heaters

Service Description:

Air heaters are one of our most versatile products that are used in various engineering industries such as packaging, textiles, rubber, automotive and many others. The product is largely demanded in the global market, for its corrosion resistance, portable and explosion proof. It has the special feature of being processed into any configuration, which suits our client's needs.

Lubrication Cooling System

Service Description:

We manufacture and export highly efficient lubrication cooling system which is used in various engineering industries. Its application is to lubricate the moving components of the product in which it is installed. Known for high performance, we can customize the products according to clients' specifications.

Ammonia Condensers

Service Description:

Widely used in various heat exchanger systems, ammonia condenser is one of our most appreciated engineering products. It is a special type of heat exchanger which condenses ammonia into liquid state from gaseous state. Its salient features include leak proof and efficient performance over a long time.

Tanks for Waste Water Plant

Service Description:

We offer an assortment of tanks for waste water plant. The product receives appreciation for its high capacity, weather resistance, leak-proof, durable and less maintenance. The tanks can be custom fabricated as per the specific requirements of our esteem clients.

Welding Equipment

**Service Description:**

We offer sturdily constructed welding equipments in standard and customized options, as per the clients' specific requirements. These equipments are easy to use and take up a small place. Loaded with various security features, our welding equipments are used in various engineering applications.
