

CONE Crushers

Typically used in secondary and tertiary crushing. Material is crushed by compression between the mantle and the bowl liner caused by an eccentrically gyrating spindle.

Automatic tramp iron protection is provided by a hydraulically assisted spring release system.

Typical standard & short head sizes include:

- 2ft
- 3ft
- 4ft
- 4 1/4ft
- 5 1/2ft
- 7ft
