

HDPE Fittings

DUTRON HDPE, MDPE and PP pipes and fittings are manufactured at state-of-the-art manufacturing plant. HDPE material is best suited against GI/DI as it is inert to most of the chemicals. Latest generation PE pipe grade raw material is used to provide ultimate strength to the product.

Pipes are produced out of extrusion process while fittings are fabricated from pipes under international ISO 9001:2015 Quality Management System. Pipe's semi-flexible property makes it convenient for handling and installation. Dutron also provides PE/PP pipe laying and jointing support for the projects on turnkey basis.

Composition: Made from special pipe grade High Density Poly Ethylene – chemically inert material that gives high impact as well as tensile strength. Manufactured at international standard production and testing facility.

Available Sizes

- 20 mm to 710 mm O.D.

Types

- Flange
- Pipe End
- Bend

- Elbow
- Tee
- Reducer
- “Y”
- Stub End
- Puddle

Specifications

- Available upon request
