

## Engine Valves

- High quality engine valves manufactured with hot forging process
- Very precise machining and grinding with OEM specification tolerances using high profile computerized controlled machineries
- High chromium and nickel based material being used. Specifications EN 52, 214N, SS 316, Incanel and can use any material as per specification
- Special Tip hardening maintained above 53 hrc.
- Chrome plating, anodizing, Phosphating and shot blasting options available
- Each part is passed through value added burnishing process
- Wide range up to 700 models suitable for worldwide cars, trucks, tractors and industrial engines.
