

## PTFE O-Rings

Being the leading manufacturer, supplier and exporter of PTFE O-Rings that are used in water turbines, gas and steam turbines and compressors with the piston in order to increase the efficient of machines. Our offered PTFE O-Rings are an ideal solution for sealing applications where there are high temperatures and corrosive liquids or gases involved. We are sourcing the raw materials from the most reliable vendors, with constancy of both the product quality and mechanical performance of manufactured parts.

These make sure the uniformity of performance of final products as well as minimizes of chances of rejections at the customer's end. Further, the offered products are widely used for the process of sealing and they are utilized in diverse industries such as the automobile and other manufacturing industries. PTFE O- Rings manufactured utilizing a high quality of raw materials and they are exported to the customers all over the globe.

### Unique Characteristics Of PTFE O-Rings

- Ability to operate without lubrication or in less lubricated conditions
- Resistance to chemical attack
- Reduced wear rates
