

Vibratory Feeder

Vibratory Feeder is ideally suited for controlling the flow of bulk materials to secondary processing Operation. Vibration produced are smooth, uniform, volumetric flow that fully variable from a dribble to surge. Vibratory Feeders are used to control product flow in the bulk handling operation such as packaging, batching, mixing, drying, weighing, sprinkling and spreading.

Our Feeders have handled a variety of materials, from dry to damp, cold to hot, fine to coarse, with different bulk densities. Some of the applications include: use in chemical plant to control flow of ingredients to mixing tanks, the food industry to sprinkle nuts and topping on cakes and ice-cream products.
