

## ***Duplex Strainers***

**Duplex type strainer** is similar to **basket strainer** and usually consists of two separate **strainer** basket housed. They have a cleanable basket which traps suspended solids. These **Duplex strainers** are designed for applications where flow cannot be shut down to service the **strainer** screen. Valve is placed between the two baskets to divert the flow of liquid to one **strainer** while the other is being cleaned. This change over is accomplished by the use of butterfly valves. **Duplex type strainer** is installed in the pipeline systems where flow cannot be stopped such as chemical process systems, lubricating systems, salt and freshwater systems and fuel lines lubricating systems, sewage water system, cooling water, condensers, compressors, pumps, fire line and positive suction head service.

We Asre Engineering are the specialist and well known manufacturer of **Duplex type Strainer in Mumbai, Navi Mumbai, Thane**. We offered precision-designed **Strainers** to our esteemed clients to meet the specific requirements of removing foreign particles in flowing applications or services. **Duplex strainers** are very economical because they are fabricated as per your specific requirements and with your choice of valves.
