

SOLAR LANTERN

Basically this type of products are very simple and user friendly nature. They are also portable products which does not require any installations.

A solar module – when exposed to sunlight, produces DC power and through a cable it is used for charging a battery in the product. The stored energy is then used for powering LED lights, when required.

We have two models of SOLAR LANTERNS

We use a High efficiency solar modules , OSRAM/PHILIPS LED Maintenance Free LEAD ACID BATTERY

SOLAR LANTERN - SUN GRACE

A unique, high bright dual bright adjustable solar lantern presented by Solkar. SunGrace apart from the normal feature as a Solar lantern, has premium features as it is designed with 2 high bright LEDs and Dual bright adjustment. In the first press of the switch, the light glows at 1/3 of its brightness which can run for 12 hours. SunGrace at 1/3 brightness actually works as a bed light. In the second press of the switch, the light glows at full brightness illuminating more than 200 lumens which can cover a distance of 300 sq.ft. At full brightness the light can glow for 6 hours. We have provided 3 indicators to show the condition of the Battery.

The body of the lantern is made of ABS Plastic with acrylic chimney and handle. The complete equipment weighs around 2 kg. Available in 4 colours. It can be switched OFF in the third press of the switch when it is not required.

Guarantee

This product is guaranteed for a period of 12 months from the date of supply while 3 months for battery. However the normal life of the battery will be 3 years at 25°C and the bulb for above 25000 hours of burning. The Solar module has a life span of 20 years.

SOLAR LANTERN - SUN WONDER

This is a portable multipurpose solar lamp specially designed for both Indoor and Outdoor usage. It has 24 LEDs in it which can cover an area of around 100 Sq. ft while it is hanged on top roof. And while walking in the dark area it can be used as Torch light, where this lamp hits the distance of around 10 feet. Supplied along with a Solar Module of 3 Watt/6V power. For a daily sunlight charge, the products are recommended for 3 hours use and in “full charge” condition, can be used for 6 hours. We have provided 3 indicators to show the condition of the Battery and also have given provision of ‘Beeper’ sound at full charge condition.

The body of the lantern is made of ABS Plastic with acrylic chimney and handle. The complete equipment weighs around 2 kg. Available in 4 colours. It can be switched OFF when it is not required.
