

Diesel Generators

Enginemates has long experience in designing and manufacturing Engine Cooling System for Diesel generating sets. The cooling package is complete and consists of either Engine Jacket Water (EJW) , Low Temperature After cooler (LTA) and fan assembly OR Engine Jacket Water (EJW) , Charge Air Cooler (CAC) and Fan assembly.

Fuel Coolers are also part of this cooling package in most modern engines. We manufacture engine cooling systems for small KVA ratings to about 3000 KVA.
