

## HSS Taps

We bring forth a wide range of improved HSS Taps in the industry. The offered tap is used for internal thread form creation. Under the manufacturing process of the tap, the use of such metals is done that gives high thread output. The most commonly used areas of this HSS Taps are bolt, nut and screw. With the use of this tap the work can be quickly done.

Besides, the offered tap has longer service life. The HSS Taps that we manufacture are known for their incredible ability to provide a high load-bearing capacity and that too with a low deflection range. When conditions of thermal expansion and contraction prevail in equipment, such HSS Taps are used to maintain the tension in the assemblies.

Our high-quality HSS Taps are also built to withstand relatively high loads with as little deflection as possible. A.S. Engg. Enterprises is the largest manufacturer of HSS Taps in India. We are based in Ludhiana and supply our products all over India. Our quality products are also exported to customers in various other countries.

A.S. Engg. Enterprises is one of the leading HSS Taps manufacturers in Ludhiana, Punjab, India. HSS Taps have become increasingly popular in today's world.
