

PUMPS

100 mm BOREWELL SUBMERSIBLE PUMPSETS

These pumpsets are best substitute for low efficient compressor Pumps and jet pumps. The prime mover motors are wet type water lubricated water cooled and rewindable motor. The stator is wound with special water proof bi-axially oriented synthetic film insulated winding wires. This pumps are used mainly for irrigational of fields, rural water supply, high rise buildings, industries, and water circulation systems.

Power	0.25 HP & 5.0 HP (Single phase & 3 phases)
Speed	2880 rpm.
Discharge range	121 lpm to 320 lpm
Head range	7 m to 157 m.
Delivery size	32 mm, 40 mm & 50 mm

150 mm BOREWELL SUBMERSIBLE PUMPSETS

These pumpsets are multistage centrifugal pumps with radial and mixed flow impellers which operates under water and suitable for 6" bore well and above. The prime mover motors are wet type water lubricated, water cooled and rewindable motor. The stator is wound with special water proof bi-axially oriented synthetic film insulated winding wires. This pumps are used mainly for irrigational of fields, farms, public water supply, high rise building, industries, pressure boosting installations and water circulation system

Power	3.0 HP & 25.0 HP
Speed	2880 rpm.
Discharge range	40 lpm to 1300 lpm
Head range	9 m to 300 m.
Delivery size	40mm, 50mm, 65mm & 80mm
