

Indian Coal

India is the world's third largest producer and consumer of coal. India also holds the privilege of being fourth largest country in terms of its coal reserve. Coal is the most abundant fuel available in india. Coal is majorly used for electricity generation in india followed by other industries such as cement industry, gasifier plants, dairy industry, leather industry etc. Indian coal is of mostly sub-bituminous rank, followed by bituminous and lignite. We supply indian coal which includes Rom coal: run of mine coal is coal which comes out of the mines directly. Rom coal comprises of all sizes, (ranging from 0 mm-500 mm or bigger). Rom coal consists of contamination from mining & rocks. Size or steam coal: steam coal or size coal is retained when rom coal is subject to crushing or screening. Steam coal is also obtained hand picked or shovel picked from rom coal. Steam coal particle size ranges from 25 mm and above.
