

Lable Printing

A label printer is a computer printer that prints on self-adhesive label material and/or card-stock (tags). Label printers with built-in keyboards and displays, for stand-alone use (without a computer), are often called label makers. Label printers are different from ordinary printers because they need to have special feed mechanisms to handle rolled stock, or tear sheet (fanfold) stock. We have a huge range of label printer for all sorts of applications and requirements.
