

# Spring Washers

**Supplier & Manufacturer of Spring Washers & Stainless Steel Washers. Our product range also comprises of Industrial Nuts, Industrial Bolts and Industrial Fasteners.**

## Washers

We are engaged in manufacturing an extensive range of stainless steel washers that are developed using top quality spring steel, stainless steel and copper. Offering a compensating spring force, these washers can efficiently maintain a load or take up shock. We specially designed these products so that when these are loaded, these washers deflect and start acting like the springs, to provide pre-load between two surfaces. Between the parts on shafts these washers work as cushion spacers and take up the probable deviation in assembled parts.
