

Industrial Gases

In general, Industrial gases are synonymous to commercially available bulk gases for high consumption. But there is another bracket of Industrial Gases which needs specified product, be it individual or in a gas mixture form. INDOGAS deals in this sector of special Industrial gases like Precision welding in heavy engineering.

Furnaces in metallurgical and chemical industries; Instrument support gas mixture for Nuclear Counter and Proportional Counter; Stack monitoring in Steel making; Process control gas mixture in Petrochemical, Fertilizer, Refinery industries; Gas for discharge light used in Lamp industry, Food processing and food packaging Industries; Transformer gases, Diving gases, Fire Extinguishing gases, Emission testing in Automobile industry; Pollution monitoring and many more.

- Argon
- Oxygen
- Dissolved acetylene
- Nitrogen
- Hydrogen
- Carbon-di-oxide
