

## **Nebulizer**

A nebuliser offers quick relief to an individual suffering from a sudden onset of an allergic asthma attack. You may pour out the recommended quantity of the prescribed medication into the nebuliser cup.

Connect the cup to the compressor and mouthpiece with the tubing pieces. Insert the mouthpiece in your mouth. Switch on the compressor. The vapour entering your lungs through the mouthpiece will provide relief after a few minutes. A nebuliser, requires normal breathing during the therapy. Asthma patients find the use of nebulisers simple and straightforward, and can use the device without assistance.
