

# DreamStation Auto CPAP

Philips Respironics newest CPAP machine, the DreamStation Auto CPAP is an automatic positive pressure device (APAP) designed for the treatment of Obstructive Sleep Apnea (OSA). The auto function allows the pressure delivered to vary in accordance with what pressure is required in order to overcome each apnic episode. With it's sleek modern design the Dream Station CPAP no longer makes your bedroom look like a hospital room.

The Dream Station Auto CPAP brings many new and improved features to the treatment of Sleep Apnea including:

SmartRamp – maintains a constant lower pressure until the device detects that you require more pressure.

User screen and control knob is located on the edge of the machine making it easier to read and control while in bed.

The Dream Station has a built in sensor to detect ambient light and dims the screen in a dark room while brightening when the room has lights on.

Opti-Start – monitors the average pressure needed and begins therapy at that pressure.

Heated Humidifier water chamber is accessible from the top of the machine making it easier to remove , fill and replace in the CPAP.
