## Rotary Siever

---

The rotating paddles break up soft agglomerates and propel individual particles through the screen while rejecting hard lumps and trash. This makes ease of screening even to the powders that has poor flow ability. A compact appearance, quiet operation, and high output make this rotating screen a highly acceptable for the various applications of the powder screening. These are available in various materials of constructions.

## Centrifugal Siever

---

It is a specifically developed machine for screening jobs of continuous type. A rotating screen with simultaneously rotating paddles inside which accelerates material for faster screening operations. A brush is also provided for cleaning the surface and enabling removal of chocking incidents.

### ***Application In:***

Food, Pharma, Chemical, Minerals, Guar Gum / Starch / Cellulose etc.

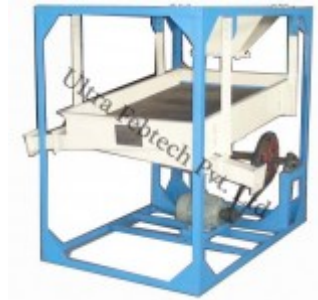

## Vibro Siever

---

High - efficiency vibratory separators, available in size from 24" to a large one 72" in diameter. Creative design features maximize screen utilization, efficiently handle widely varying feed rates and consistencies, increase throughput, prevent blinding. One to multilevel screen surfaces yielding desired numbers of predetermined fractions with accurate separations in various mesh sizes. The equipment also can be supplied with dust cover and other special auxiliaries. Material of construction will be choice of customer and largely will depend on the application.

Application In:

Food, Pharma, Chemical, Minerals, Guar Gum / Starch / Cellulose etc

## Eccentric Siever

---

We make different types of sievers like eccentric siever, vibro siever, rotary siever, centrifugal siever etc.

We are renowned in the design and manufacture of size reduction, gradation and mixing equipment.

Gradation equipments like siever, rotary siever, screening equipments, Vibro screen, centrifugal shifter, Vibro shifter
