

Aluminium Foil

Aluminium foil Packaging provides the essential barrier needed to stop the ingress of moisture and escape of subtle flavours. It also prevents the UV rays, present in most forms of lighting, from causing 'photo-oxidation' and the rancid taste from fat and oil components in food products.

We are one of the prominent manufacturers and suppliers of Aluminum Foils that are widely demanded in domestic, industrial and commercial sectors. Available in multiple sizes, shapes, thickness range and designs, these thin foils are used for preventing medicines and other products from gases, odor, vapor, dust and moisture. Proffered aluminum foils are appreciated for their durability and excellent finish.

Once safely protected from light and gases, the food retains its nutritional value and texture until re-hydrated. The unique dead fold characteristic along with excellent barrier properties of aluminium foil makes it the most proffered choice for packing of vast variety of food stuff.

Product Features:

1. *Eco-friendly*
2. *Durable*
3. *Prevents moisture and other contaminants*
4. *Available in various sizes*
5. *Gold & Coloured Foils*
6. *Food Grade Materials*
