

Bag House

Bharat Heavy Machineries has maintained its dominance in Bag House [Turnkey Plant] technology for a long time. Our plants are used to meet the varied and special requirements of our clients by using the latest technology and step by step perfect methodology. The simplicity yet the effectiveness of our technology allow it to be utilized in many different industries for the production of specific products, and in environmental applications.

Design and Engineering Expertise

A new plant must be designed to take advantage of the latest technology and industrial experience. Our extensive investment in research and development activities maintains the Group in the forefront of turnkey plant expertise. This coupled with our experience from thousands of references enable the best offering in design and engineering, and the total project management service.

Fabrication

The bests of design and technology are of no avail unless the resulting hardware meets the highest possible standards, too. With a combination of own workshops and selected sub-suppliers, we maintain the highest levels of workmanship in plant fabrication

User-Friendly Design

- Controls integrated with engineering and fabrication
- PLC systems
- Distributive control systems

Field Service / Support

- On-site project engineers
- Experienced field technicians
- Comprehensive online support
- Full CAD support
- Full documentation and validation

Final installation and Assistance

Our engineers are present on site during both mechanical commissioning and process start-up when operating conditions are optimized, guaranteed performance demonstrated, and assistance given in training plant operators.

Types

- Automatic Spices Plant
- Automatic Chilly Plant
- Gypsum Plant
- Saw Dust Plant
- Besan Plant
- Turmeric Plant
